Claims 3 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, the phrase "integrated into said artwork" is vague and indefinite. In claim 13, the phrase "sufficiently weighted" is indefinite.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 12-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Lomas.

Lomas discloses a paper stack having a plurality of leaves, and an element (10) attached to all of the leaves in the stack. The intended use of the element for "teething" is not attributed patentable weight in the context of a article claim. Any printed matter which is printed on the leaves may be read as "artwork". The leaves are flexible and thin, and thus read as a "cloth-like" material. This claim language does not explicitly require the existence of cloth.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lomas.

Art Unit: 3712

Lomas differs from claims 9 and 10 in that the element shown by Lomas is not attributed a specific size. However, forming the element with the sizes recited in claims 9 and 10 would have been obvious to one of ordinary skill in the art as a choice of design.

Claims 1 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee.

Lee discloses a book like structure with an element (10) attached thereto. The element (10) may include a tether (82). No patentable weight is attributed to the intended usage for teething.
